Summary

Strives to deliver software solutions that truly delight and provide value to customers. Continually self improving and encouraging and supporting those around me to be better.

Experience

[NAVEX Global](#)

December 2010 to present **Team Lead/Architect**

The last team I managed was focused on improving the UX of a number of products that were developed as separate products in separate companies. These products were declining in sales due to market pressure. With my own team's initiative all of the flagship products were redesigned to reflect a common design that presented the unified vision the company had for these products. With the new design these products were back as the number one in the industry and when a third party came to review the products they thought they had been designed by the same company.

As the UX team lead the team was able to accomplish these outcomes with a style guide and through UX research which were both newly introduced.

I was also a team lead for one of our product development teams at the same time. We were able to deliver on a number of business requirements including a reporting solution, a custom rule engine for notifications and data export tool.

Before I was a team lead I worked as a senior developer. I was able to work on a number of time sensitive projects that were in danger of not meeting their deadlines. This included an adaptive case management feature which in danger of not being completed. With the ACM project I was able to rally the team and deliver within the timeline.

[Epiq](#)

March 2008 to December 2010 **Architect**

Design and implement internal and customer facing applications for a variety of end users utilizing the Microsoft stack (C#, ASP.Net and Silverlight). I'm a mentor to the development team in any capacity to help them achieve success on their projects. I work with management to organize and optimize development processes.

[SAP](#)

May 2006 to August 2008 **Software Developer**

Helped research, elaborate, develop and maintain our enterprise planning product with 25 million dollars in revenue. I developed solutions in .NET (C#, ASP.NET), C++, Java, VB and VBA. These solutions included querying and manipulating Oracle, Sql Server and DB2 databases.

[Sorensen Associates](#)

November 2002 to May 2006 **Software Engineer**

I work on a small team of developers to create new market research techniques that allows manufactures and retailers to gain intimate knowledge of what the customer does while in the retail space. Currently this is mostly using a patented technique called Pathtracker ©. I work mostly with data warehousing and data delivery systems. I've contributed algorithms to correlate data and improve data quality.

Education

Heald College

2001 to 2003 **AA, Information Technology**

4.0 GPA, Comptia Award for Excellence in Computer Troubleshooting and Hardware, and Student Mentor

Skills

Knowledge

Scrum, OOP, Data Warehousing, Object Oriented Design(OOP), Agile, web services, micro services, software architecture

Technologies

javascript, HTML5, CSS3, Bootstrap, AWS, Docker, C#, .NET, ASP.NET, MVC, SQL Server, React, Angular, webpack, ES6, TypeScript, NodeJs, Gulp, Grunt, Npm, Yarn, Bower, Entity Framework, IIS, apache, MySQL, PostgreSQL, MS-SSAS, OLAP
